

FOR THOSE WHO PLANT

Professional outsourcing of production
processes in agribusiness

The idea of the business is that farmers outsource some of the work.

We take on all the daily work.

We free up time for managers to develop their business. We are realizing the possibility for an agricultural enterprise to be more profitable.

Comprehensive solution Carefield - outsourcing of production processes «turnkey».

From technology development to its implementation.

Tillage

Basic and pre-sowing tillage.

Application of mineral fertilizers

1

Sowing works

Purge and treating with a mordant on mobile complexes.

Sowing seeds with simultaneous application of starting fertilizers: dry and liquid

2

Protection

By self-propelled sprayers and drones.

By simultaneous application of fertilizers.

3

Harvesting

Collecting with use of reloading trailer

We buy the harvest before sowing.

4

Principles of Precision Agriculture at each stage of work

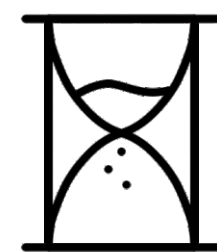

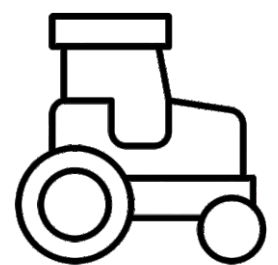

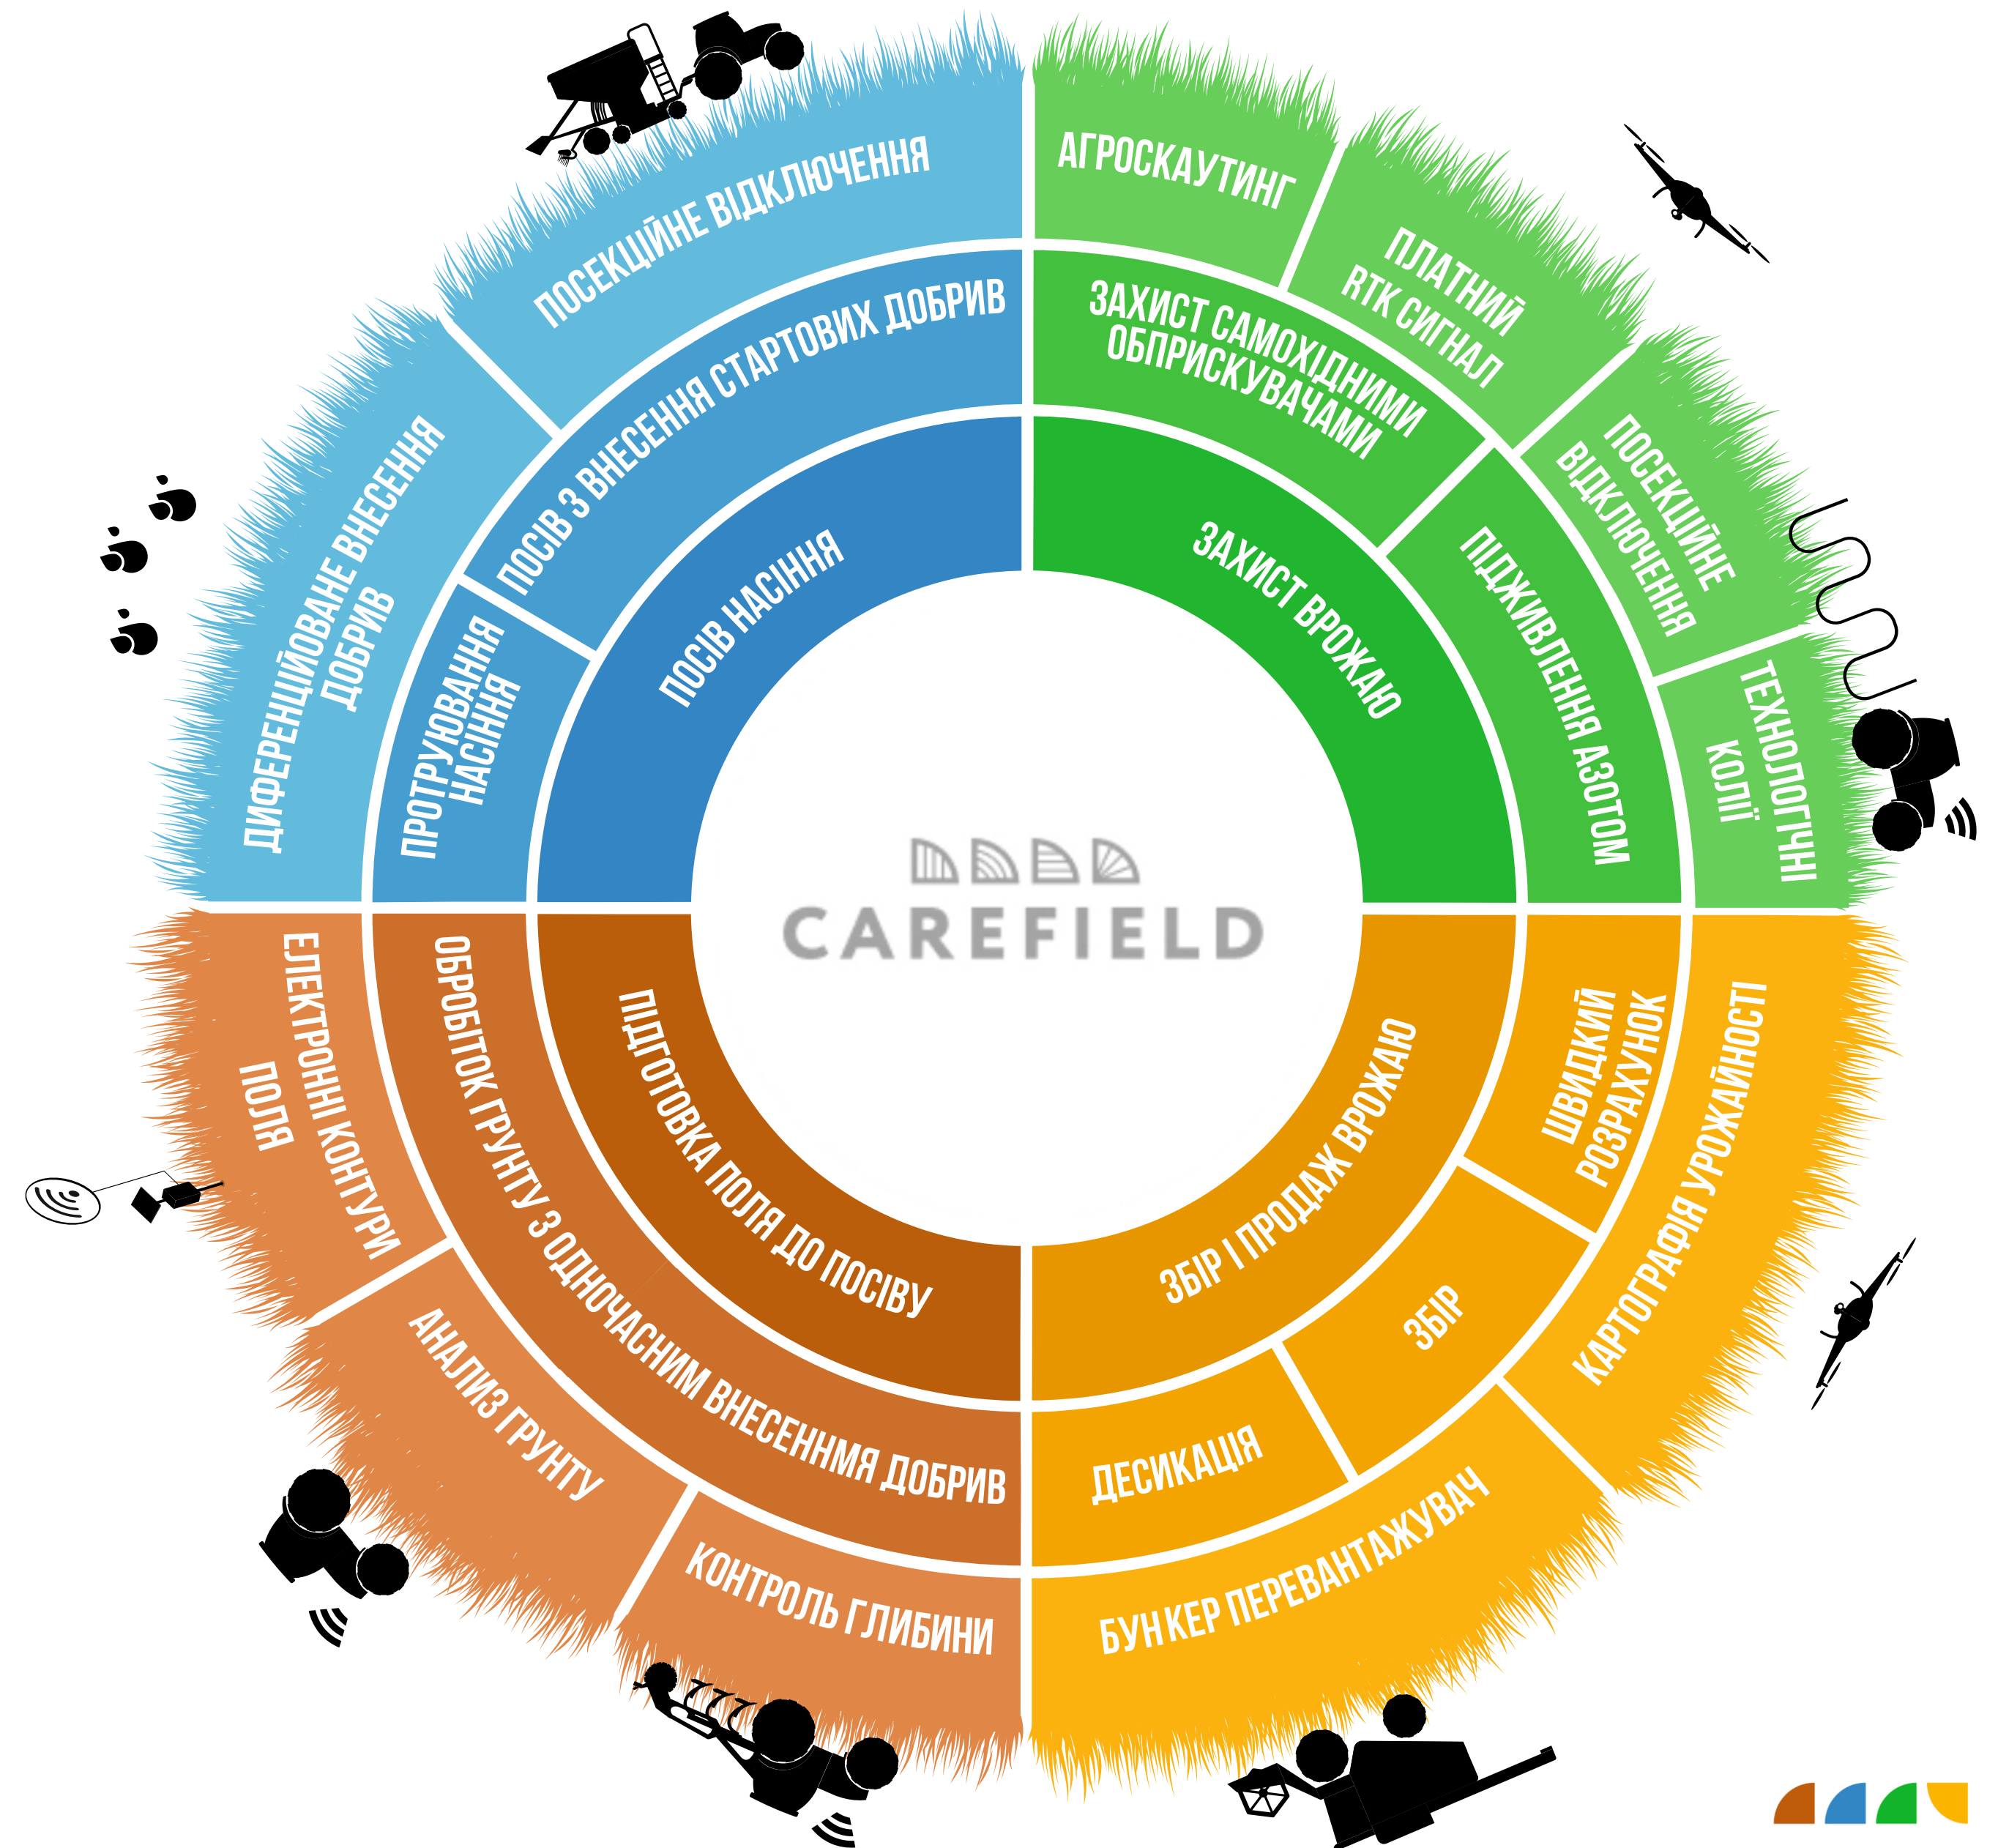

Development of technology using satellite or drone monitoring, soil and crop rotation analysis. We provide step-by-step instructions for implementing solutions.

We make all the necessary settings for the operation of machinery on the principles of precision farming.

We have a full set of equipment: from harrows to aircraft, to perform all modern solutions. We set up on-line reporting, convenient for farmers.

The comprehensive Carefield service is:

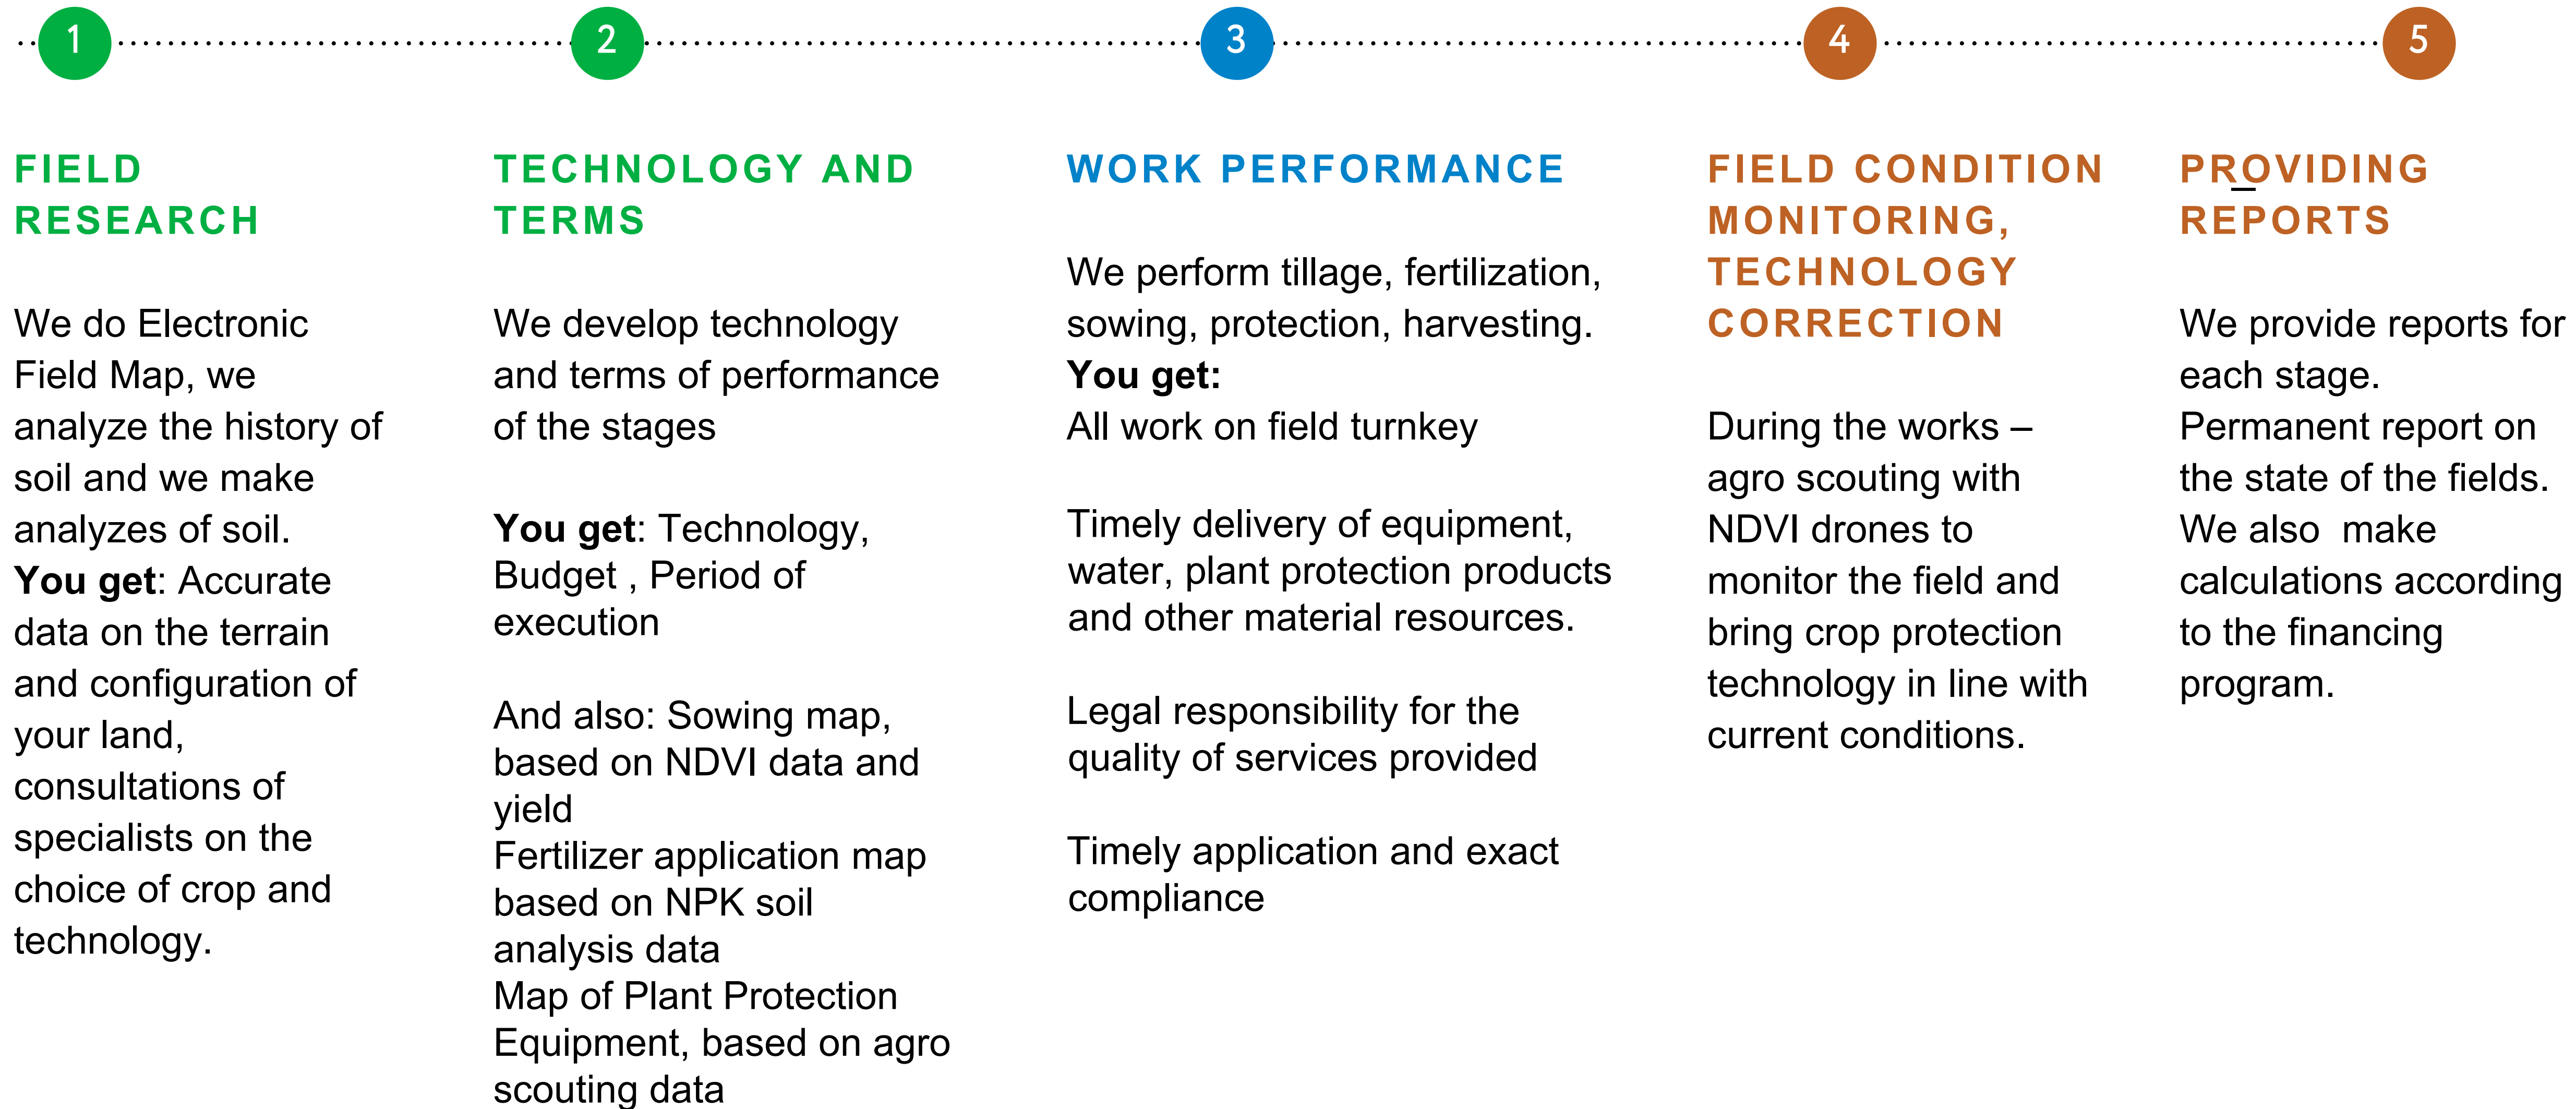

- Development and implementation of technology
- Full agronomic support, with the technology of precision farming
- Full range of works, materials, fuel and agrochemistry
- Location of the necessary equipment within easy reach of the farm
- Availability of technical staff during the season
- Harvest sale

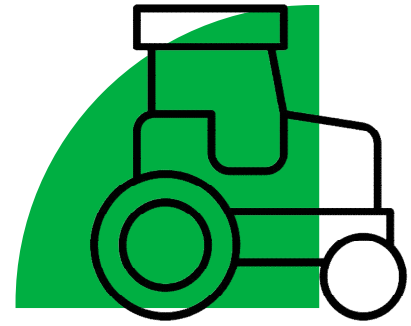

HOW DO WE DO THAT?

Stages of performance of the work

Advantages of Carefield`s cultivation :

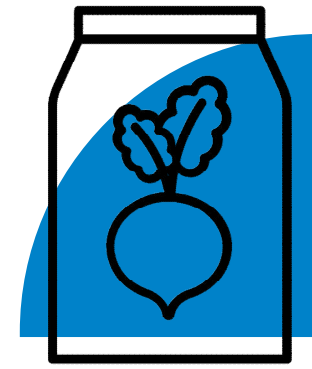

MACHINERY

Reduction of gaps and overlaps by using the most modern equipment

Reduction of sowing and fertilizer costs, due to differentiated sowing with paid RTK signal

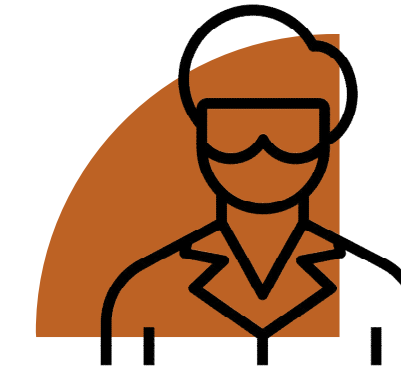

Fuel saving due to simultaneous operations on sowing, application of Plant Protection Products and fertilizers

AGROCHEMISTRY

Rational use of means of protection, due to the use of cards of differentiated processing

Saving the means of protection and fertilizers, due to parallel driving and section shutdown

PERSONNEL

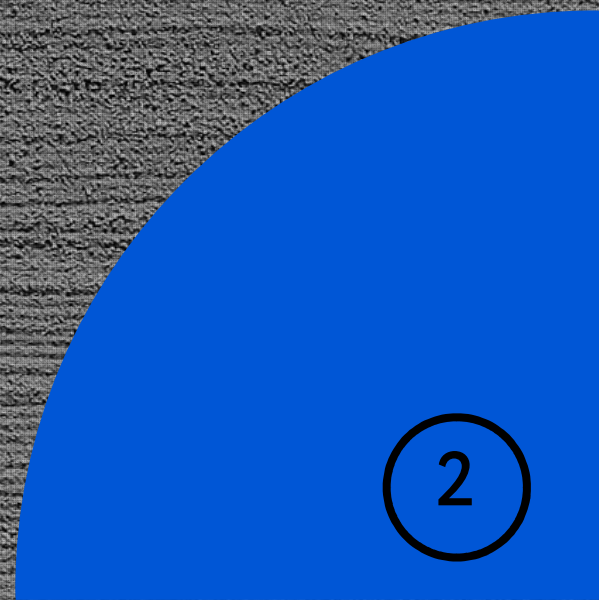

Agro scouting. Field condition control, using unmanned technologies

Display of all production processes and their consequences online

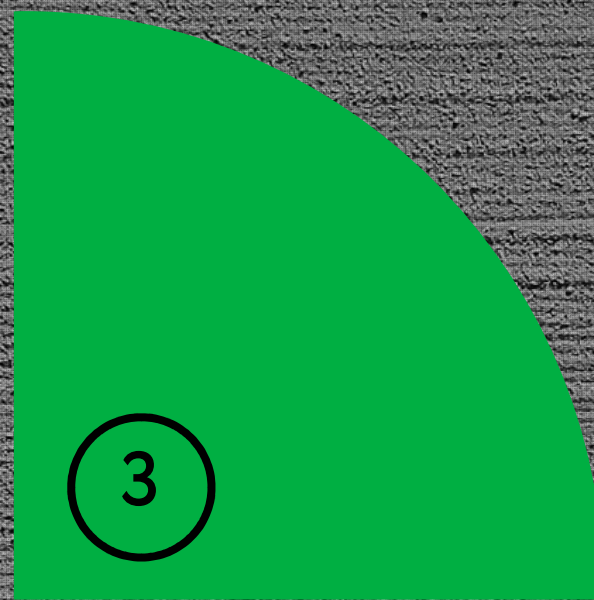

Execution on time, due to the availability of staff, equipment and service center.
